EXTREME

LA Linear Actuator

For Applications in Ultra-High-Vacuum and Cryogenic Environment

RoHS compliant

CE

Motors for use in vacuum should not only withstand the vacuum (no bursting of air inclusions), they must not contaminate the vacuum either. Through many years of experience with special materials for use in Space, we have put a focus on materials with minimal molecular outgassing and high heat resistance. This is the prerequisite for a high vacuum quality and genuine measurement results in scientific and medical applications.

For exact positioning in vacuum, stepper motors are therefore particularly suitable because they can precisely position even without sensitive feedback providers. Therefore phytron linear actuators can be used in particularly challenging environmental conditions (radiation, cryo-temperatures).

Since stepper motors do not generate jitter effects while holding a position, this technology is ideal for precisely aligning optical instruments, mirrors, antennas or samples e.g. in high-resolution microscopes, particle accelerators or molecular analysis devices.

phytron LA linear actuators for cryo (UHVC1;UHVC2) and UHV (UHVS) are completely dry lubricated.

Highlight

Cleanliness

phytron motors for use in ultra high vacuum (UHV) contain only materials that also meet the requirements of the ECSS (European Space regulations). Thus, each material has a maximum TML (Total Mass Loss) value < 1% and a maximum CVCM (Volatile Mass Losses) value < 0.1 %. You will receive your UHV motor, double-wrapped and vacuum sealed..

in focus

high temperature

vacuum

radiation resistance

low temperature

- 2-phase stepper motor
- diameter 25 mm
- linear speed 1.5 mm/s
- linear stroke 13 mm
- Spindelsteigung 1 mm
- positioning accuracy <0,01 mm
- operating temperature
  - cryo version:
    UHVC1: -196 to -50 °C
    UHVC2: down to -269 °C (on demand)
  - UHV version (UHVS): -40 to +200 °C
- rotatory encoder with switching cam
- linear limit switches for stroke limitation
- temperature evaluation
- mounting position: any
- lifetime (worst case)
  100 000 strokes min.

Options

- VGPL precision planetary gear

control electronics for vacuum application: *phy*MOTION™

modular stepper motor controller for in-vacuum applications

The *phy*MOTION™ controller is ideally equipped for the demands of in-vacuum projects. Beside the encoder evaluation (differential incremental encoder with quadrature signals, absolute encoder acc. to SSI standard, BiSS- and EnDat-encoder) a resolver and temperature sensor evaluation of each axis is possible for monitoring of the driven motors. This functions can be integrated as optional submodules of each axis – in addition to the default limit switch evaluations of each axis. The better part of cabling effort is eliminated because the power stages are already integrated.

All illustrations, descriptions and technical specifications are subject to modifications; no responsibility is accepted for the accuracy of this information.
